SUMMARY

Software Engineer proficient in a multi-language stack including **Python, PHP, Java, JavaScript, and C++**. Expert in developing **CRUD applications (Laravel)** and complex **AI-integrated automation systems**. Experienced in managing full-cycle data pipelines, from **web scraping (HTTPX/Selenium)** to **relational database design (SQLite/SQL)**. Strong background in collaborating with US-based clients to translate complex technical requirements into efficient, scalable software solutions.

EXPERIENCE

Software Engineer Intern

Mar '26 — Apr '26

BitBash

DHA Rahbar, Lahore

- **Automated 3 internal data workflows in Python**, cutting manual processing time by **~70%** and eliminating data entry errors across daily pipeline runs.
- **Built a hybrid scraper (HTTPX + SeleniumBase)** achieving **100–200ms** response times, sustaining **100+** hours of continuous uptime under production load.
- **Architected modular notification systems** by integrating third-party APIs (such as Discord) to provide real-time alerts and automated status updates for critical tasks.
- **Implemented persistent storage solutions** using **SQLite** to handle data deduplication and maintain historical records for automated pipelines.
- **Collaborated with senior developers** in an agile environment to ensure all automation tools followed best practices for code maintainability and scalability.

PROJECTS

Intelligent Vehicle Verification, Surveillance & Public Safety Platform using AI, FYP-UOL

Mar '26 — Present

- **Tech Stack:** React.js, React Native, Node.js, MongoDB, OpenCV, TensorFlow, PYTHON.
- **Engineered an AI pipeline** (TensorFlow + OpenCV) achieving **~85%** ANPR accuracy and **60+** FPS throughput, deployed across web and mobile platforms with real-time **Socket.io** alerts.
- Built web dashboard (React.js) and mobile app (React Native) with Node.js/Express backend and MongoDB database.
- Implemented real-time alerts (Socket.io), offline AI processing, and role-based access control.

Upwork Discord Job Bot, BitBash

Apr '26 — Apr '26

- **Tech Stack:** Python 3.8+, discord.py, Selenium, GraphQL, SQLite, Socket.io.
- **Reverse-engineered Upwork's private GraphQL API** to build a Discord bot that monitors Multiple job categories, delivering listings with **<5s** latency and zero duplicates via SQLite deduplication.
- Implemented hybrid architecture combining fast HTTP requests (100-200ms) with browser automation for token refresh.
- Created professional Discord integration with automatic thread generation, real-time notifications, and multi-URL support.
- Built comprehensive authentication system with JWT token management, error handling with exponential backoff, SQLite deduplication tracking, and production-grade logging for 100+ hour stability testing.

ONLINE BOOK STORE E-COMMERCE PLATFORM, University of Lahore

Oct '25 — Jan '26

- **Tech Stack:** Python, Flask, JWT Auth, SQLAlchemy ORM, Relational Database Design, SQL.
- **Designed a normalized 9-entity relational schema** (SQLAlchemy + Flask) supporting full order lifecycle — cart, checkout, review — with JWT-secured role-based access control.
- Implemented comprehensive shopping cart system, order processing workflow, and user review functionality with role-based access control.
- Built efficient database schema with foreign key constraints, cascading operations, and optimized query patterns for inventory tracking, order management, and review aggregation.

PROPERTY MANAGEMENT SYSTEM - FULL STACK, University of Lahore

Nov '25 — Jan '26

- **Tech Stack:** Laravel 12, PHP 8.2, MySQL, Eloquent ORM, Laravel Sanctum, HTML5, CSS3, JavaScript, Bootstrap/Tailwind.
- Built a full-stack property management platform with Laravel 12 backend and responsive HTML/CSS/JavaScript frontend. Implemented role-based access control (Admin, Agent, Client) with Sanctum token-based authentication and email verification.

- Designed comprehensive property CRUD operations with server-side validation, image uploads, and cascading deletion. Created advanced search and filtering system with pagination, sorting, and multiple filter options.
- Built role-specific dashboards displaying property analytics and metrics. Implemented PropertyPolicy authorization, middleware-based access control, and secure API endpoints. Designed responsive frontend consuming REST API via Fetch with local storage token management.

EDUCATION

Bachelor of Science in Software Engineering, University of Lahore

Feb '23 — Present
Defence Road, Lahore

- **Maintained a 3.00 Cumulative GPA**, achieving a peak **3.55 SGPA** in Latest coursework.
- **Mastered core Software Engineering principles**, including SDLC methodologies, systems design, and database management.
- **Developed technical proficiency** in web development and software testing through hands-on, collaborative academic projects.
- **Strengthened analytical problem-solving skills** by designing efficient software solutions and optimizing system architectures.

SKILLS

Programming Languages: PYTHON, JavaScript, Java, PHP, C/C++, HTML5, CSS, XML

Frameworks & Libraries: Bootstrap, TailwindCSS, Selenium, GraphQL, REST API, FLASK, Laravel

Database: MYSQL, SQLite

Tools & Technologies: GIT, GitHub, VS Code, Figma, Discord, Postman

Soft Skills: Problem Solving, Team Collaboration, Leadership, Time Management, Cold Outreach, CRM

Interests Cricket, Badminton, Book Reading, Travelling

Languages English-Fluent, Urdu-Native, Punjabi-Native
